## SURRENDER OR DIE!

FREDERICK KRAISSL, JR., P.E.

Chairman

The Kraissl Company, Inc.

How would our readers like the idea of this confrontation coming over loud speakers on some strategic occasion? Impossible, you say, but is it? Let's look at the facts. When we have demonstrated over a long period of time, during which we were in complete control of all atomic weapons, that we had no desire or intent to impose our will on, or conquer other nations, why is another nation so feverishly bent on having superiority over us in all armaments? Nations do not spend these kind of assets without purpose. What is the purpose? Every Soviet leader, since Lenin has restated and acted toward the Communist goal of world domination. To the Soviets, Detente is simply another means of continuing the conflict, and cancelling out our previous superiority without provoking extensive counter efforts. This must be reversed if we are to preserve our freedom, in my opinion.

I realize that the strategic opinion of an Ex-Lieutenant Colonel might be subject to question, if I did not have before me similar convictions of top ranking military authorities, and excerpts from the First Annual Report of the Joint Committee on Atomic Energy, U. S. Congress.

We are indebted to The American Security Council for permission to reprint the following charts and other information which give the source and our relative position in armaments. The facts were released by government officials, some of whom have apparently seemed unwilling to admit that this adds up to our weakened secondary position. We have not heard too much of this from the media, either published or over radio or video. Why? The following comment is reported to have been made in a feature article published in The New York Times under the caption RETREAT,

on April 3, 1975. "The administration can no longer conduct a credible American-Foreign Policy, but do not worry, a new foreign policy line has already been laid down by Congress." If you surrender the killing will stop. It is a clear message to the world of the abject surrender of the United States."

One aspect of our SALT I Agreement, which is properly named MAD is totally incredible. It is known as the Mutual Assured Destruction Theory, in which it is agreed not to defend our civilian population. This is why all surface to air missiles in the U. S. were dismantled. Since we are not interested in conquering other nations, our total interest in armaments should be defensive. Assuming that these missiles are as good as reported, they should be the greatest defensive means in a nuclear age, conceivable. If missiles can be released that will destroy oncoming missiles directed toward us before they reach our shores, this should be the ultimate objective. Why should citizens retain representatives who have agreed to make them candidates for destruction? I do not agree that this is what the citizens of the United States want, or that it is too late to reverse our defensive position. I cannot conceive of a nation wishing to celebrate our Bicentennial, spending the kind of time, effort, and substance, if we were not proud of our heritage, and proposed that it be continued for our posterity. I believe that the group working for our assimilation and disintegration have purposely kept our citizens in ignorance of our vulnerability. Possibly the scandals of Watergate were disclosed so that attention would be diverted from the greatest threat to our Freedom and Security, since Valley Forge.

In this connection, it should be shouted in a loud voice, and large letters that we could lose our freedom if a certain group of congressmen are permitted to continue unchecked. It is reported that on January 30, 1976, ten congressmen, representing 124 members of the U. S. Senate and House of Representatives, met in Independence Hall, Philadelphia, and signed a parody on The Declaration of Independence, and called it a "Declaration of Interdependence." It calls for

a renunciation of American Sovereignty, and the establishment of a United Nations World Government, which would regulate every phase of every "world citizen's" life, under world government. The United States and all other nations subscribing to it, would surrender their sovereignty to the world government, which would exist as bureaucratic administrative units. No nationalism would exist. A formal call has been made for adopting this declaration on July 4, 1976, a fine travesty on our bicentennial celebration of The Declaration of Independence, to which, together with The Bill of Rights, we owe our FREEDOM. The one world movement, which has been around for a long time was quickly reactivated, and without publicity, was voted out of the House Rules Committee, as Atlantic Union Resolution Bill No. H.J.R.-606, on March 9th, and rushed to the floor for a vote two days later. The speaker called for a vote during the week of March 29th. On April 12th, the House voted on this Atlantic Union Proposal and defeated it 194 to 165, with 73 congressmen not voting. So close was the enactment of this resolution, and we are indebted for this information to Mr. Ernest V. Joiner, Editor of the Sebastopol Times of Sebastopol, California, who finishes with this statement, "We have 165 congressmen on record, as being willing to surrender our national sovereignty to a foreign conglomerate of nations, and 73 who haven't the guts to be counted on a proposal that affects the lives, liberty, and property of every American." These are the kind of representatives we have, and I think the money we are spending on our Bicentennial could be better used to replace them, if we really mean to preserve our sovereignty, as please do not believe for a moment this issue is settled.

The very least each of us can do is to ask for a voting record of the congressmen representing us, on the Atlantic Union Resolution designated H.J.R.-606. With this information each of us either individually, or through patriotic organizations, of which we are members, can express our attitude on whether we approve or disapprove of their action. Let's let them know that the determination

to be citizens of a Free United States, that takes orders from **nobody, or group of countries**, is still the dominant will of the majority.

MID-1975 BALANCE	U.S.	U.S.S.R.
Interceptor Aircraft	532	2,650

### Phased Unilateral Disarmament

As the figures on the facing pages show, the United States is engaged in phased unilateral disarmament and has already fallen well behind the Soviet Union in military strength.

In sharp contrast, the Soviet Union is straining its economy to further increase its military superiority over the United States.

As Secretary of Defense Schlesinger summarized the trend in an interview published in the December 1973 *Fortune* magazine, "For at least five years, the U.S. military strength has been declining while that of the U.S.S.R. has been increasing. In constant dollars, U.S. defense spending in 1973 is 40% below the level of 1968; Soviet spending has meanwhile increased by 16 percent in real terms."

Secretary Schlesinger said in his February 5, 1975 annual report to the Congress that:

"In our prices, the Soviets now devote more resources than the United States in most of the significant categories of defense." In this connection, he reported that they "outstrip" us "in Strategic Offensive Forces by 60%."

In signing the SALT I agreements, the United States adopted the incredible Mutual Assured Destruction (MAD) theory and agreed not to defend its civilian population.

This is why all surface-to-air missiles in the U.S. were dismantled.

General L. D. Clay, Jr., Commander-in-Chief, North American Air Defense Command (NORAD), in a November 13, 1974 speech declared, "We no longer have as our primary mission the air defense of the North American continent."

General Clay said that NORAD would still provide warning of a strategic attack, but he added the chilling comment that "... the nation as an entity and every citizen in it may measure longevity from the instant warning is received."

The facts in this folder have been released by governmental officials. Yet most of these same officials feel politically restrained from publicly admitting that these facts add up to the Soviets having already gained military superiority over the U.S.

Table from "ANNUAL DEFENSE REPORT, FY 76," Secretary of Defense James R. Schlesinger, p. 1-6.

Table from "ANNUAL DEFENSE REPORT, FY 76," Secretary of Defense James R. Schlesinger, p. 1-6.

Chart reproduced from page 6 of statement by Secretary of the Navy, Middendorf before House Armed Services Committee, March 3, 1975.

"... the United States is in a tougher power position than it has been since Valley Forge. Not since Valley Forge has any foreign country had the ability to destroy or seriously cripple the United States. That capability exists today." Lt. Gen. Vernon A. Walters, Deputy Director, CIA, July 23, 1975.

"The nation is in great danger. Our danger is increasing every day. . . . The Soviet Union's expansionist foreign policy is backed by a military building program which has no peace-time parallel in world affairs. . . . In the face of the Soviet military build-up and Soviet foreign policy, our defense budget is an invitation to disaster." Foreign Policy Task Force, Coalition for a Democratic Majority, April 1975.

## THE STRATEGY OF DETENTE

"For the Soviets, detente is intended to facilitate their attainment of ultimate, overall dominance over the West.

"... in the U.S. detente tends to be seen as an end in itself, in the U.S.S.R. it is seen as a strategy for achieving broader Soviet objectives as well as tactical aims without fueling the sorts of concern that might galvanize the West into serious counteraction."

"Soviet long-term strategic objectives, which the detente strategy seeks to promote include: . . . the establishment of Soviet political, military, technological and economic superiority worldwide. Soviet detente strategy has facilitated Soviet strategic nuclear expansion and the cancelling out of U.S. superiority without provoking extensive Western counter efforts." *Detente in Soviet Strategy*, an Estimate by the Defense Intelligence Agency, Department of Defense, September 2, 1975.

### CONVENTIONAL GROUND FORCE WEAPONS

	U.S.S.R.	U.S.
Tanks	40,000	9,000
Armored Personnel Carriers, and Fighting Vehicles	30-40,000	22,000
Artillery	15-20,000	6,000
Heavy Mortars	5-10,000	3,000
Helicopters	2,000	9,000

Table reproduced from page 69 of General Brown, Chairman of the Joint Chiefs, "U.S. Military Posture Statement" for fiscal year 1976.

# THREE PIECE CONSTRUCTION CLASS 72A STEEL SEPARATORS

**CLASS 72 INDUSTRIAL DUPLEX STRAINERS**  
BULLETINS A1430, A1431, A1879

For the benefit of inquirers or those interested who are not regular customers we are reprinting a copy of a memorandum on our new policy.

1. It has been the decision to designate our Class 72A Three Piece Construction Steel Separators, covering both strainers and filters as our standard design. These are described in our bulletin A-1879.

2. A principle reason is that steel foundries casting the housings from economically designed patterns of integral construction have not produced predictably satisfactory castings. This is not only a most costly procedure, but produces most exasperating delays. While it is axiomatic that castings can be rejected if not found satisfactory, the waste time in machine work cannot be recovered. After each rejection, there is the new time schedule before castings are received, and then rejections can again occur.

After four or five or maybe more rejections, delays become unbearable, and the amount of waste machine work untenable. Regardless of how economically the units are priced, the lost machine work eliminates all pos-

sibility of a reasonable profit, and most of these transactions are handled at a loss. The reason for this can be simply explained. There has been no satisfactory production method of determining in advance whether castings will leak when they are machined. If the leaks are of a nature that cannot be corrected, the machine work is wasted.

We have manufactured our three piece construction units for many years with very little trouble, and the sizes indicated are listed by Underwriters Laboratories. The three element castings are much simpler, and can be produced with very few rejections. The integral casting is much more complicated, due to the complicated cores. The three piece construction units are very rugged, and we use heavy duty wall thickness in both the standard and high pressure separators to minimize porosity. The double joining flange between the side bodies and the valve center section acts as a strong reinforcing rib around each side of the assembly, tying the unit together like the construction of an autoclave.

The deliveries are about half the time of integral units due to the fact that the components can be cast in different foundries and that we have minimum difficulty with rejections.

Integral units will be regarded as specials and quoted accordingly. The integral price list is therefore withdrawn.

We are also showing drawing of Three Piece Construction Transfer Valves. These can be supplied at the same prices as Three Piece Construction Separators as we have found that the adaptor plates can be supplied as part of the assembly at the same price as separator side bodies.

If enough of any size of any of these assemblies are sufficiently popular with any of our customers to justify this action we will carry them in stock.

If these units are purchased for resale purposes please send us resale certificate number to justify resale discount if this is not already on file with us.

This does not apply to cast iron or cast bronze assemblies. The reason is that both cast iron and bronze are cast at much lower temperatures than steel and integral castings can be produced from these metals with very few rejections up to the sizes that we offer them. Since bronze can be cast at even lower temperatures than cast iron, the integral sizes in bronze can be larger as will be noted.

Basically the three piece construction reduces the complication of core arrangement which in turn simplifies metal flow and minimizes the entrapment of air or other gas bubbles which is usually the cause of porosity or other defects. Porous conditions, cavities and what looks like termite channels are not revealed until machine work opens them up. Sometimes they can be filled with weldments or the porosity filled by impregnation. When such treatment leaves a doubtful or unacceptable casting there is no alternative except rejection. From there on it is the old story of disappointment in delivery schedules and losses due to the wasted machining operations.

## BICENTENNIAL OPERATION ALERT

The BICENTENNIAL OPERATION ALERT is a joint Paul Revere-type educational project coordinated by the American Security Council. Its objective is to warn the public about the growing Soviet threat so that every citizen may intelligently participate in the debate as to how this threat should be met.

An April 1975 Opinion Research Corporation poll showed that three-quarters of the American people want the security of U. S. military superiority over the Soviet Union.

However, American people have not been told that the United States has become the second best military power. Since the voters have not been alerted, the debate has been dominated by the massively financed anti-defense lobby which has been weakening the United States.

To: **Bicentennial Operation Alert**  
**Washington Communications Center**  
**Boston, Virginia 22713**

- I am deeply concerned about the growing Soviet threat to American freedom and want to help alert and organize other Americans to demand that our government regain strategic superiority as the only way to keep peace and freedom.
- I've enclosed a contribution of \$.....
- Please send me.....copies of the Operation Alert folder @ two cents each to give to my friends.

Please make check payable to ASC Bicentennial Alert

**A Call for Defense  
Against the Greatest Threat  
to American Freedom  
since Valley Forge**

After standing by my great, great, great, great grandfather's grave during a Memorial Day Ceremony honoring soldiers who served in the American Revolution, I determined to do what I could to return our country to a position of security. As I am way beyond retirement age for membership in the Armed Services, I decided my alternative was to find out whether the pen is really as mighty as the sword. I hope you will join me in contributing to Bicentennial Operation Alert.
